## SOFTWARE ENGINEER

508 826 5991 | Portsmouth, RI 02871 | [sarah.deleppo@gmail.com](mailto:sarah.deleppo@gmail.com) | <https://sarah-deleppo.com/>

### WORK HISTORY

#### FULL STACK SOFTWARE ENGINEER

##### Tulip

*February 2022-February 2024*

- Architecting and integrating the full stack of features essential to the launch, delivery, and maintenance of Tulip's iOS PoS system using PHP, Golang, JavaScript, ReactJS, Docker, Kubernetes, and GCP which yields over six PoS high-end retail clients since launch in 2023
- Key contributor to Tulip's PoS system's success VIA developing and upkeeping features, enabling thousands of daily sales by companies such as Purolator, Mulberry, and other high-end retailers with 0% downtime
  - Contributions increased in-store transactions by 10% since using Tulip's PoS
- Collaborating across teams and with stakeholders regarding the requirements, development, and monitoring of key PoS features involving cart & order functionality, receipts, exchanges, taxes, discounts/promotions, gift cards, coupons, and more
  - Efforts generated at least 12 new features per quarter including rigorous testing & monitoring of feature usage post-deployment
- Pioneering the refactoring of legacy receipt generation systems, replacing inefficient code with fast, maintainable solutions
  - Led to a 30% increase in receipt generation speed & optimized architecture reducing development time by 50%
- Driving the implementation of cross-team features, including designing, planning, and refactoring three of Tulip's services to create one seamless appointments-to-PoS-to-inventory management system for 3 clients to utilize with their unique internal systems
- Promoting clean and maintainable code while accelerating meticulous testing procedures following engineering best practices in RESTful API.
  - Documenting strategies & features to assist future engineers in following Tulip's best practices, streamlining the process for communication between QA engineers and developers
- Promoting and utilizing best practices within the team VIA daily code reviews, mentoring 4 junior developers, countless documentation, and biweekly technical knowledge-sharing talks

#### SOFTWARE ENGINEER IN TEST

##### Ocean State Job Lot

*June 2021-December 2021*

- Formulating test scenarios, contributing to planning and design of new e-commerce website, updating testing scripts to reflect the evolution of the website using Java and Selenium
- Collaborating with developers and product owners ensuring all aspects of features are thoroughly tested, advancing the safe, secure deployment of Ocean State's launching e-commerce Buy Online Ship to Store
  - Sales from secure, well-tested e-commerce launch generated an increase of revenue from previous years by \$11,000,000

---

## SOFTWARE QUALITY ASSURANCE ENGINEER

**UserTesting**  
May 2021-August 2021

- Mitigating risk, bugs, & security issues by conducting real-time communication of software analysis
- Manual testing to ensure high-quality software development and deployment of over 10 products

## SOFTWARE ENGINEER

**Massive Hawk Games**  
January 2015-January 2016

- Fabricating a variety of video games alongside teammates in multi-developer, Agile-based settings using C# in Unity 5. Efforts produced over 4 newly created video game titles hosted for users
- Placing in 3 video game development competitions in which games were hosted online for userbase

## TEST AUTOMATION ENGINEERING INTERN

**Cegment Inc.**  
July 2012-September 2012

- Bug fixing and automated test harness for FASFA.com and college's Net Price Calculators using Selenium and Python 2.6

---

## PROJECTS

### INDEPENDENT DEVELOPMENT prev. known as OctoSloths Productions

- Deploying two full-stack mobile applications to the Google Play Store developed in C# using Unity5. These applications included leaderboards, allowing users to compete against each other online seamlessly
- Designing and implementing over 7 full-stack web applications using React, NodeJS, Express, Spring Boot, MongoDB, Bootstrap, and more utilizing RESTful API

---

## EDUCATION

### Bachelor of Science in Computer Science - Southern New Hampshire University 2021

Graduated with highest honor: *summa cum laude*

Graduated with a GPA of 3.9 out of 4.0

---

## SKILLS

- |                        |                         |                               |                       |
|------------------------|-------------------------|-------------------------------|-----------------------|
| • JavaScript           | • C#                    | • Golang                      | • MongoDB (NoSQL)     |
| • PHP                  | • Git                   | • Docker & Containerization   | • GCP                 |
| • SQL (MySQL)          | • SCRUM Master          | • CI/CD                       | • Kubernetes          |
| • ReactJS              | • Agile Methodologies   | • Spring Framework            | • Python              |
| • AWS                  | • ShapeUp Methodologies | • Bash                        | • HTML5/CSS           |
| • Automation           | • RESTful API           | • Linux                       | • Express             |
| • NodeJS               | • Frontend Development  | • Prometheus                  | • Backend Development |
| • Monitoring & Logging | • Documentation         | • Grafana                     | • Saas                |
| • Java                 | • Unit Testing          | • Object Oriented Programming | • Debugging           |
|                        | • Web Development       |                               |                       |
-
